

NOEL PAUL MOSES JANGAM

San Jose, California • 480-953-4826 • jangamnoelpaulmoses@gmail.com • [Linkedin](#)

SUMMARY

Software Engineer with 5+ years of hands-on software development experience, including over 3 years of full-time experience. Skilled in building **scalable, cloud-native applications** and **maintaining build pipelines, CI/CD automation, and distributed backend systems** in **UNIX/Linux environments**. Proficient in **AWS, GCP, Docker, Kubernetes**, and scripting in **Python, Java, and Bash**, alongside modern full-stack technologies such as **TypeScript, ReactJS, and NodeJS**. Passionate about integrating **AI/ML capabilities** using tools like LangChain, OpenAI, and Hugging Face to enhance product intelligence and user experience. Adept at collaborating with clients, QA, and product teams to deliver reliable, high-performance software.

TECHNICAL SKILLS

- **Languages:** Python, Java, Bash, C++, JavaScript, TypeScript, HTML/CSS.
- **Frameworks/ Libraries:** ReactJS, NodeJS, NextJS, ExpressJS, React Native, Streamlit.
- **Cloud Platforms:** Amazon Web Services (AWS: Lambda, ECS, S3, SQS, SNS, DynamoDB, CloudWatch, Cloudfront), GCP Cloud Run.
- **Operating Systems:** Linux, MacOS, Windows.
- **Databases:** SQL (MySQL, SQLite, PostgreSQL, Oracle), NoSQL (MongoDB, Amazon DynamoDB).
- **Development/ AI Tools:** Git, GitHub Actions, Docker/Kubernetes, Vercel, Render, Hostinger, LangChain, n8n, BoltAI, LovableAI, Gemini, OpenAI API, Open Router, Hugging Face, AutoGen, FAISS, OAuth, GitHub Co-Pilot, Cline.

PROFESSIONAL EXPERIENCE

Founding Full Stack Engineer, Naviget, San Jose, CA

February 2025 - Present

- Built Naviget's cloud-based medical imaging full-stack application on Linux environments, enabling real-time, HIPAA-compliant rendering of 2D MRIs and CT scans into visualized 3D models using **NextJS, Supabase, OAuth and PostgreSQL** for scalable, secure processing.
- Built an **AI-powered log parsing** API that identifies potential errors and failure patterns from deployment logs, improving incident detection speed and reducing manual triage workload.
- Developed a resilient DICOM file upload system using **AWS S3, Lambda**, handling 500+ image uploads daily with robust error handling and encryption.
- Deployed **Dockerized file upload services** to **AWS ECS Fargate and Kubernetes clusters**, ensuring scalable, fault-tolerant execution of high-volume DICOM uploads.
- Engineered an AI-powered video slider tool for dynamic, real-time before-and-after MRI scan comparisons using **NextJS, TypeScript**, and **Python-based Lambda APIs**, enhancing diagnostic accuracy and improving user interaction.
- Reduced AWS costs by 40% by migrating long-running **DICOM** processing workflows from **AWS Lambda** to **ECS** using **Docker**, optimizing for sustained workloads and minimizing per-invocation billing overhead.
- Led backend dashboard integration with **REST APIs** and **PostgreSQL**, writing optimized SQL queries, schema migrations, and managing relational data for real-time imaging metadata.
- Contributed Naviget's official acceptance into the **NVIDIA Inception Program**, leveraging CUDA-powered processing and accelerated computing to drive new advances in DICOM workflows and next-generation imaging platforms.
- Designed and maintained scalable build **pipelines** and **CI/CD automation** with GitHub Actions using Python and Bash scripts, integrating performance benchmarking and rollback strategies, resulting in 10+ successful deployments per month with zero critical post-deployment issues.
- Automated system notifications with **AWS SNS and SQS**, and integrated Microsoft Teams for real-time incident response.

Software Engineer Intern, RoomieHub, Phoenix, AZ

June 2024 - November 2024

- Designed and implemented 4 intuitive navigation components for the User Profile dashboard in the mobile application using **React Navigation, NodeJS and REST APIs**.
- Led development of 2 primary modules: User Profile Navigation & Progress Tracking using **React Native, PostgreSQL**, and **Redux**.
- Deployed User Profile module on **AWS EC2** ensuring 99.9% uptime and efficient resource utilization for the backend.
- Developed home screen functionality, supporting image uploads up to 10 MB and enhanced **state management** using **Redux**.

Software Engineer, Tata Consultancy Services (Client: AWS), Hyderabad, India

October 2021 - July 2023

- Developed and deployed **Java-based Lambda functions** for data ingestion pipelines handling thousands of documents daily using AWS Textract and S3.
- Led the migration of a monolithic **Java** service to a **modular, containerized architecture** using **Docker** and **Kubernetes** on **AWS**, improving deployment flexibility and fault isolation.
- Designed modular services and built CI/CD pipelines for automated container builds, implementing rolling deployments to minimize downtime and support independent scaling of high traffic modules.
- Contributed to **Amazon CodeWhisperer**, a Low-Code/No-Code developer productivity platform.
- Developed **25+ AWS APIs** and respective backend services leveraging **Java**.

- Produced **SNS** with **AWS SQS & Lambda** managing over 400 notifications daily.
- Collaborated with **cross-functional** teams at Amazon to design and implement resilient **Java** backend services, enhancing internal developer tools and streamlining API integration workflows, leading to faster and efficient development cycles.

Software Engineer Intern, Verzeo, Hyderabad, India

June 2019 - November 2019

- Developed a comprehensive **AWS hosted** E-commerce solution, leveraging **AWS Elastic Beanstalk and Cloudfront** to improve page load times and data-processing efficiency by 25%.
- Designed and implemented core system functionalities, including user authentication, product catalog management, and order processing.
- Collaborated extensively with experienced engineers to identify and resolve technical problems, and improved code to enhance performance and scalability.

PROJECTS

[HireHack.ai](#), Tech Stack: TypeScript, NextJS, NodeJS, PostgreSQL, REST API, SendGrid, Google OAuth

- Built a full-stack SaaS platform and published a **Chrome Extension** that automates LinkedIn job applications that has helped users apply to over **4,000 roles** with AI-powered resume feedback.
- Integrated **Lemon Squeezy** for secure subscription billing with Razorpay support, and **SendGrid** for transactional, welcome and promotional emails.
- Successfully deployed HireHack.ai and its dashboard on Vercel and AWS with CI/CD workflows enabling seamless updates and rollbacks.

[NoelPaulMoses.com](#), Tech Stack: JavaScript, ReactJS, ThreeJS, Vite, EmailJS

- Built a personal portfolio website with a special focus on dynamic and responsive UI components using **JavaScript** and **ReactJS**.
- Specialized in integrating 3D models using **ThreeJS** into the website and auto deployed on **Hostinger** via **Github**.

LinkedIn Scraper, Tech Stack: Python, Selenium, DataKund, CSV, Hashlib

- Developed an automated scraping tool using **Selenium** and **DataKund** to ethically extract publicly available contact information and metadata from LinkedIn.
- Collected and processed structured data from over **15,000 active job seekers**, enabling meaningful behavioral insights and engagement analytics.
- Implemented **batch-wise extraction and incremental CSV writes**, ensuring memory efficiency and resilience to interruptions.

Real Time Text-to-Speech System, Tech Stack: Python, FastAPI, WebSockets, Kokoro, Colab

- Engineered a real-time TTS system using **FastAPI** and **WebSockets** to stream audio chunks with synchronized captions directly to clients.
- Integrated the **Kokoro** model for low-latency, natural-sounding speech generation supporting both plain text and LaTeX math expressions.
- Built a **LaTeX-to-speech** conversion layer using Speech Rule Engine (SRE) and latex2mathml, translating formulas into human-readable narration.
- Optimized the pipeline with asynchronous event handling, audio resampling (librosa), and real-time latency tracking, achieving smooth streaming under 300ms per chunk.

EDUCATION

Master of Science - Computer Science (GPA: 3.83/4.0)

May 2025

Arizona State University, Tempe, AZ

Bachelor of Technology- Computer Science

May 2021

VNR Vignana Jyothi Institute of Engineering and Technology, Hyderabad, India
